

3.5. Deliverable E — SQL Scripts (PDF file)

Query 1: Donator

The first query is if donator's wish to use see where their money is being used in the countries. To portray this information the focus was on the data from "impacts 2024" to do this in the code we joined FUNDING_PARTNERS, COUNTRY_FUNDING_PARTNERS, COUNTRY AND CONTINET, we the left joined OVERVIEW, OUR_WORK and LOCAL_PARTNERS together and created a table relaying this information for users to view. This query was useful as it shows the donator how their money will impact the country or region they are donating to while also informing the user about what partners they will be investing into so they can do further research into the companies if they wish. This may also have the chance to persuade individuals who are just viewing the website to want to donate.

Expected Output:

```
1 SELECT
2   F.partner_name AS Funding_Partner,
3   C.country_name AS Country,
4   CO.continent_name AS Continent,
5   O.overview_description AS Overview,
6   O.impact AS Impact,
7   OW.why_description AS Why,
8   OW.work_description AS Work,
9   LP.local_partner_name AS Local_Partner
10 FROM
11   FUNDING_PARTNERS F
12 JOIN
13   COUNTRY_FUNDING_PARTNERS CFP ON F.funding_partner_id = CFP.funding_partner_id
14 JOIN
15   COUNTRY C ON C.country_id = CFP.country_id
16 JOIN
17   CONTINENT CO ON C.continent_id = CO.continent_id

Query 2: Volunteers

The second query focuses on users who would want to volunteer for Trocaire. Similarly to query 1 the main data a volunteer would wish to view would be where they would be working and what work they would be partaking in. To display this information the code joins OUR_WORK onto COUNTRY and CONTINENT the table is then ordered by country_name and continent_name. This is done to show volunteers the array of countries they could avail to volunteer in. This is useful as it will easily display the information for users in an A-Z format to allow for easy viewing of the many countries that Trocaire operate in.

Expected Output:

```
1 SELECT
2   CO.continent_name AS Continent,

3.5. Deliverable E — SQL Scripts (PDF file)

Query 3: General Public

In the third query the focus is on the public. As users in this bracket will be accessing the website without a set motivation unlike the previous queries, the focus was on displaying concise data and information. To display this information the SQL script acts, to join COUNTRY with COUNTRY_METRIC and METRIC together, this is done using left join method where COUNTRY_METRIC is left joined with country_id and METRIC is left joined with metric_id. The data is then ordered by continent_name, country_name and metric_name. This is useful as the data is then ordered by area in the world which makes the data more accessible for the user to navigate. This could convince users to donate or volunteer despite them only wishing to view the website's content to start with.

Expected Output:

```
1 SELECT
2     CO.continent_name AS Continent,
3     C.country_name AS Country,
4     H.metric_name AS Metric,
5     H.metric_description AS Metric_Description
6 FROM
7     COUNTRY C
8 JOIN
9     COUNTRY_METRIC CM ON C.country_id = CM.country_id
10 LEFT JOIN
11     METRIC M ON CM.metric_id = M.metric_id
12 WHERE
13     H.metric_id IS NOT NULL
14 ORDER BY
15     CO.continent_name, C.country_name, H.metric_name;
```

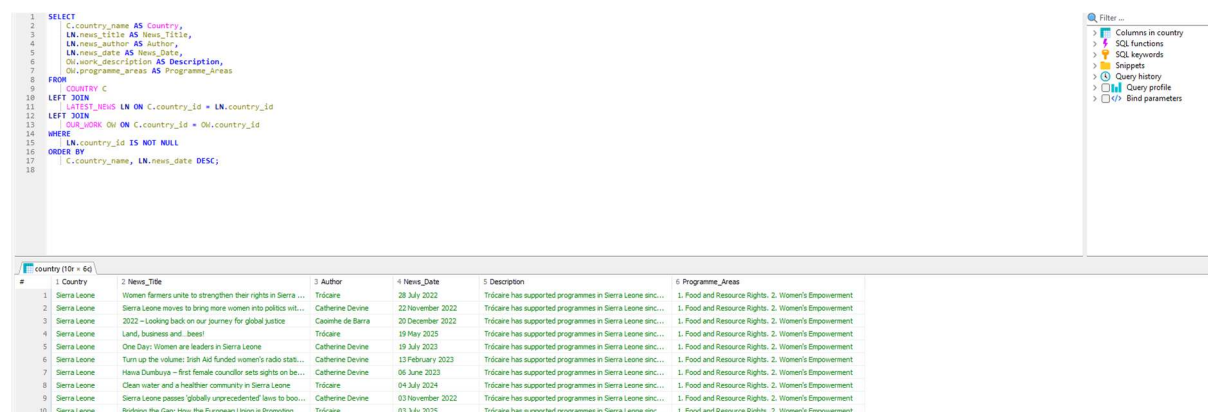

#	1 Continent	2 Country	3 Metric	4 Metric_Description
1	Africa	Sierra Leone	Human Development Index	Ranked 181 out of 189 countries
2	Africa	Sierra Leone	Life expectancy	54 years
3	Africa	Sierra Leone	Poverty	58% live in poverty
4	Africa	Somalia	Life expectancy	57 years
5	Africa	Somalia	Population	15 million
6	Africa	Somalia	Poverty	69% live in poverty
7	Africa	South Sudan	Expected Years of School for Children	6
8	Africa	South Sudan	Life expectancy	58 Years Old
9	Africa	South Sudan	Maternal Deaths per 100,000	1,223 deaths per 100,000 births
10	Africa	South Sudan	UN Human Development Index Ranking	Ranked 193 out of 193 countries

3.5. Deliverable E — SQL Scripts (PDF file)

Query 4: Beneficiaries

The fourth query focuses on beneficiaries. As the user's major focus will be on what aid is coming to their country or area, the focus of the SQL query is about what news and work is being done in countries. To generate this query, we joined OUR_WORK and LATEST_NEWS to the left of country_id, doing so brought the focus of the data on the news and work that Trocaire are currently partaking in, inside the country of the user. It is then ordered by country_name and news_date. This is done to allow for ease of viewing of the data so users can find the country they wish current to view in a fast and convenient manner and they know what news is most relevant and up to date, so they don't access news that is outdated.

Expected Output:

```
1 SELECT
2   C.country_name AS Country,
3   LN.news_title AS News_Title,
4   LN.news_author AS Author,
5   LN.news_date AS News_Date,
6   OW.work_description AS Description,
7   OW.programme_areas AS Programme_Areas
8 FROM

3.5. Deliverable E — SQL Scripts (PDF file)

Query 5: Journalists

The fifth query is catered journalists covering Sierra Leone who wish to report on the work done by Trocaire. The SQL script like query 4 for this involves joining code from the left. For example, LEFT JOIN LATEST_NEWS LN ON C.country_id = LN.country_id. The query shows journalists a list of news resources on Sierra Leone, their dates, and their authors respectively. It also returns a detailed description of the work Trocaire do in Sierra Leone, providing additional information for journalists to use in their articles separate to the news stories given. LATEST_NEWS is important as this is where Trocaire and display this information. This table is then grouped by news_date, this is done to display the information of when these events are taking place and so they are structured from most recent to latest.

Expected output:

```
1 SELECT
2   C.country_name AS Country,
3   LN.news_title,
4   LN.news_date,
5   LN.news_author,
6
7   OW.work_description AS Work_Description,
